CLEAN

Smart Cleaner™
for Fiber Cleaning

Introducing the new cleaners for MPO, SC, LC optical connectors. Expanding its lineup of optical cleaners, Senko is able to respond to an even wider range of its customers needs.

for SC, FC, ST, E-2000

for LC, MU

CONNECT

XP Fit Plus™
Field Installable Connector

The XP Fit Plus is a pre-polished, pre-assembled connector that uses index matching gel. An internal mechanical grip, gently but effectively holds the fiber in place and can be installed in under 2 minutes. Without polishing or adhesives the XP Fit Plus makes on site installations quick and easy, diminishing the need for epoxy curing and hand polishing at the work site.

SENKO
SENKO GROUP® Advanced Components

Over 50 percent of all network failures are caused by contamination.

It is imperative that connectors be inspected and cleaned prior to mating.

👍 CLEAN

When to clean?

Whenever you make a fiber optic connection in any network

OPTICAL CONNECTOR CONTAMINATION

What do the standards say?

The test procedures specified by 568-C require tools and procedures for **ensuring connector quality.**

- **End faces on cords and trunks shall be in accordance to IEC 6100-3-35.**
- **Use a microscope that is compatible with IEC 61300-3-35**
- **The microscope must use adapters that are compatible with connectors.**
What is IEC 61300-3-35?

- **A set of requirements for Fiber Optic connector quality.**
- **Designed to guarantee insertion loss and return loss performance**
- **Used as reference between supplier & customer**
- **Used as condition for accurate testing of components and links.**

General Acceptance Criteria

**Separate criteria for different connector types, and performance.**

- **SM-UPC IL <= 0.30dB/RL>55dB**
- **SM-APC IL <=0.35dB/RL>65dB**
- **MM-PC IL <0.35dB**
- **Multi Fiber SM IL <0.50dB/RL> 60dB**
- **Multi Fiber MM IL <0.50dB**

What happens if the optical connector end face becomes contaminated?

Examples of common contaminants adhering to end face:

**Hand Lotion**   **Fiber Residue**   **Dirt and Dust**

Troubles caused by connector end face contamination

**Light is transmitted poorly or not at all**

Light is reflected back to connection point*

returning to the transmission point, causing equipment breakdown or bit errors
Optical connector must have no contamination prior to mating

What can happen when the optical end face is dirty?
The beam of light may not be able to travel through the core. Optical connectors become contaminated from a variety of reasons. Usually 2-15 micron sized contaminants will have an impact on the signal transmission and could cause damage to the optical end face. The majority of network down time is caused by optical connector contamination.
Light beam is prevented from passing through due to contaminants on the end face, resulting in light reflection.

Fiber Residue

Light ray

Reflected light

What can happen when contaminants adhere to the core?

Mating a clean connector to a dirty connector

When the unclean optical connector is mated, the contaminant is forced into the ferrule and may become permanently damaged. In this situation, the damage cannot be removed with an optical cleaner.

Clean connector + *Dirty connector* = *Dirty or Damaged connector*

When contaminants adhere to the core, they will cause increase in signal interruption and increase amount of insertion loss and degradation of return loss. Also, these kinds of contaminants can cause chips, pits, and scratches in the connector end face under the pressure of the physical connection. Large contaminants can result in gaps in the physical connection, resulting in increased loss. These kinds of contaminants can actually spread and migrate by the physical connection.

Contaminants at the side of the ferrule prevent light from properly passing through due to poor alignment.

Contaminant

Light ray

Where High Power Lasers are used

When residue or contaminants adhere to the optical connector, it will produce heat. This not only could melt the optical fiber, but could also destroy devices and equipment.
Core damage caused by high power laser in contact with end face contaminants

Why not IPA?

- Infinitely hydroscopic-self contaminating
- Slow drying (hangs in slit of alignment sleeve, and guide pin holes in MPO)
- Bottled IPA is easily contaminated during handling
- Leaves Residue

Residue remains after cleaning with IPA

The Smart Probe allows technicians to inspect the fiber endfaces, providing a high-definition image with a resolution up to 720px.

Smart Cleaner for MPO

Designed to work with MPO connectors, this instrument cleans the ferrule end faces removing dust, oil, and other debris without nicking or scratching the end face. The SENKO Smart Cleaner for MPO is a dry cloth cleaner to clean MPO connector with "push and click" mechanism. Like the other Smart Cleaner series, the cleaner the dust cap of the cleaner acts as an adapter for cleaning unmated connectors.

Smart **Cleaner**

600+ CLEANINGS **FOR EACH CLEANER**

ORDER CODE	DESCRIPTION
SCK-SS-MPO	Smart Cleaner MPO

SPECIFICATIONS

Product Name	Smart Cleaner MPO
Compatible Connectors	MPO, MTP
Compatible End Face	Compatible with flat and 8 degree angled endface with or without guide pins

· Designed for all types of multifiber connectors
· Cleans jumper end face both male and female
· Compact size for easy hand-held operations
· Dry-clean without the use of harmful substances
· Cleaning micro fibers are densely stranded and debris free
· Constructed with anti-static material
· 600+ cleanings per unit
· Easy pushing motion engages connector and initiates cleaner

Cassette Cleaner

The Cassette Cleaner wipes away contaminants from optical connector end face with ease. Just as with our previous products, the cleaning tape does not produce dust, and provides special cleaning strength while resisting foreign particles to mix into the tape. The main body also is made from antistatic material. The tape advance mechanism has been simplified, reducing the number of assembly parts to a minimum resulting in cost reductions for both manufacturing and assembly.

Smart **Cleaner**

Smart Probe™
for Fiber Inspection

The Smart Probe allows technicians to inspect the fibre endfaces, providing a high-definition image

WIRELESS DEVICE

Wi-Fi Transmitter on board

*Tablet/phone not included

ANDROID APP ON **Google play**

Images are captured digitally and streamed on the monitor of any compatible device

The FTTA Smart Probe allows technicians to inspect the fiber endfaces. Images are captured digitally and streamed on the monitor of any Android Tablet or Smartphone. The FTTX Smart Probe is an ergonomically designed, compact, Wi-Fi probe for smart phones and tablets. Featuring integrated Wi-Fi module and left/right handed thumb or finger operation for greater ease of use and convenience. Incorporating high resolution sensor outputting 960 x 544 pixel resolution images at 16:9 aspect ratio, the Smart Probe can easily view two MT/MPO fibers rather than just a single fiber. The App, available from Google Play, includes digital zoom and still capture capabilities.

FEATURES

- WiFi streaming: easily connect with Smartphones and Tablets
- Replaceable and rechargeable battery
- Available adapter tips (LC, SC, FC, ST, DIN, MPO)
- High-Definition image
- True completely wireless probe.
- Integrated Wi-Fi module
- Highly compact easy to use design
- Left or right handed thumb/finger operation
- Free Smart Phone/Tablet app with digital zoom and still capture functions
- Tips for all common connector types for both patchcord and patch panel inspection

Smart Probe™

Smart Probe Wi-Fi

Digital Fiberview is a digital inspection probe for visualization of connector end faces and detection/analysis of connector defects. The device features high resolution, fiber auto detection/centering and user defined Pass/Fail criteria.

The probes can be used for either bulkhead or patch cord inspection, such as SC, FC, ST, LC, MU, E2000 - PC & APC as well as MT, MTP/MPO, SMA and other military connectors.

Smart Source

Smart Source is ideal for field or laboratory testing of optical communication systems at 850 nm / 1300 nm for datacom testing, 1310 nm / 1550 nm / CWDM 1270 nm ~ 1625 nm (20 nm spans) for all WDM testing, as well as 1490 nm for FTTX testing by using interchangeable SFP transceiver modules. Smart Source features zero warm up time, superb productivity and has an easy to use, pocket-sized, rugged design. The smart source can be changed to accommodate either SM or MM by simply switching out the SFP's. The lightweight hand held design eliminates the need to carry big and bulky test equipment.

ORDER CODE	DESCRIPTION
AFT-G-MF-LS	Smart Source Mainframe

SPECIFICATIONS

Laser Class	Class 1
Wavelength (nm)	Select required wavelength Smart Source SFP Plug-In module and order separately
Output Power	1mW @ 25ºC into singlemode fiber
Mode	CW/2 kHz Pulse
Battery Type	AAA 1.5Vx2
Output Power Accuracy	+/-0.2 dB
Stability (8 Hours)	+/-0.05 dB
Operating Temperature	0~ 50℃
Storage Temperature	0~ 70℃

FEATURES

· No pre-warm up time
· Interchangeable SFP module design for wavelength flexibility
· Excellent output wavelength stability
· Excellent re-connection repeatability
· Low Voltage Battery warning
· Compatible to LC Connectors

SENKO GROUP® Advanced Components

MPO 12 Smart Checker
VISIBLE FAULT LOCATOR

OVERVIEW

The MPO Visible light source is a useful tool designed for checking the Fiber ports in both MM and SM assemblies, or checking for defects in a MPO arrayed fiber cable. It emits a visible 650nm wavelength visible red laser light through fiber optic cables; if there are breaks or defects in the fiber then the light will refract, creating a bright glow around the faulty area. The Laser Diode output signal can be switched from all fibers at the same time or sequentially through each individual fiber in either Continuous Wave Mode or Flashing Mode to obtain different visual effects.

ORDER CODE	DESCRIPTION
AFT-G-FC-MPO	MPO 12 Smart Checker

SPECIFICATIONS

Cable Compatibility	4, 8 and 12 channel MPO Single Mode and Multi-Mode
Measurement	Fibre continuity by Visible Fault Location
Functions	Individual fibre channels selected using rotary switch and two digit LED display Select mode for all channels: continuous wave or pulsed
Light Source and Detector	Red laser on each output channel
Power	Internal lithium battery, re-chargeable via USB port Capacity: 1400mAh, min. battery life: 5 hours
Laser Class	Class 2B
Wavelength	650 nm ± 10 nm @ 25 degC
Spectral Width	< 10 nm
Optical Output Power	> 0.4 mW @ 25 degC into 9 µm fibre
Light Emitting Range	> 3 km
Operating Temperature	0~ 50℃
Storage Temperature	0~ 70℃
Weight	0.65 kg
Dimensions	168mm (W), 128mm (D), 35mm (H)

INSPECT CLEAN CONNECT KITS

👍 CLEANING

Smart Cleaner 1.25 or 2.50

Designed to specially work well with the LC/MU and SC/FC/ST/E-2000 connectors, this instrument cleans the ferrule end faces removing dust, oil, and other debris without scratching the end face.

Smart Cleaner Mini 1.25 or 2.50

Designed to specially work well with the LC/MU and SC/FC/ST/E-2000 connectors, this instrument cleans the ferrule end faces removing dust, oil, and other debris without scratching the end face.

Smart Cleaner MPO

Designed to work with MPO connectors, this instrument cleans the ferrule end faces removing dust, oil, and other debris without nicking or scratching the end face.

Cassette Cleaner

The Cassette Cleaner wipes away contaminants from optical connector end face with ease. The cleaning tape does not produce dust, and provides special cleaning strength.

Fiber Optic Cleaning Pen

This precision cleaner quickly cleans the end faces of fiber optic connectors, while eliminating electrostatic charge which can attract airborne contaminants to the end face.

Lint Free Wipes

These inexpensive tissues can be used dry or with several cleaning solvents to clean off ferrule endfaces or prepare fibers for termination and/or splicing.

Cleaning Solvent

This fast-acting cleaner can be used with dry fiber wipes or tissues to remove dirt and soils from optical fibers prior to termination and fiber optic splicing or to clean the end of connector ferrules.

4x4 NON-Woven Wipes

Non-Woven cloth wipes can be used alone or with alcohol or solvents. Provides superior cleaning of fiber optic connector ferrules without risk of scratching or lint residue.

Senko's Optical Connector Lineup creates reliability in telecommunications service

The cause of numerous problems in optical communication equipment is contamination of the end face of optical connectors. Senko has developed optical fiber cleaners with fiber specifically for optical connectors to help create a reliable telecommunications service. Senko's optical connector cleaners eliminate even the smallest contaminants that are visible only through magnification.

Connector and Cleaner Compatibility

Before Cleaning   After Cleaning

Why is cleaning optical connectors so important?

Contamination of the optical connector end face can easily occur. The transmission quality will be affected once the contaminants adhere to the 10μm diameter optical fiber core, and there is increased danger that the fiber end face will be damaged by any high powered light. Cleaning the optical connector end face is extremely important before making a connection.

Ferrule End Face Cleaners

LC Plugs / MU Plugs

For Video Equipment

LEMO Connector
Optimal compound connectors

Cleaners for Video Equipment

CLETOP Stick 2.0/2.5mm Double Ended

CLETOP Stick 2.0mm Type

Optimal cleaning for various video equipment (LEMO, Tajimi brand, etc.)

Dry Cleaning
How to Dry Clean

KITS

Insert the jumper and push the outer shell to begin cleaning. A click sound will indicate that the cleaning is complete. Some mechanical cleaners are compatible with male and female jumpers as well as the MPO and other connectors.

Smart Cleaner
Single-fiber mechanical cleaner (male/female)

Smart Cleaner MPO
Multifiber mechanical cleaner (MTP/MPO, male/female)

Cassette Cleaner
Patch-cord mechanical cleaner (female only)

Dry cleaning using a mechanical cleaner is recommended as the first step. If, after two dry cleaning attempts, soil is still present on the connector, try Wet-Dry cleaning.

Wet-Dry cleaning
How to Wet-Dry clean

Wet-Dry cleaning is a mix of wet and dry cleaning methods and involves using a solvent. The first step is to clean the connector endface with a solvent and then dry any remaining residue with either a wipe or a swab. If, after using the Wet-Dry cleaning method, the connector still fails to meet the acceptance criteria, consider replacing the connector.

Fiber Optic Cleaning Pen
Used to dispense optical grade solvent to clean connectors

Cleaning Stick
Used to clean the inside of female connectors and adaptors

4x4 NON-Woven Wipes
Used in dry cleaning procedures and also used to dry off any solvent

How to Clean Using the Wet-Dry Method

1 Wet a corner of the wipe with solvent.

2 In a smooth linear motion, trace the endface of the jumper twice over the wet area.

3 In a smooth linear motion, trace the endface of the jumper three times over the dry area.

Precision Cleave Tool (Angled)	AFT-SE-AFC-08

*Note: The contents of this Kit are the same as the XPFP- F, but alternatively, includes a Angled Cleaver.*

Contents may vary according to region

The XP-Fit Installation Kit contains everything needed for installation of the SC and LC XP FIT PLUS connectors. No epoxy, polishing film, or other consumables are required, and there is no need for electrical power, allowing installers to get in and out of installation sites quickly.

FEATURES

· Fast installation to minimize onsite labour costs
· Compatible with conventional LC & SC connectors and adaptors
· Easy operation
· Quick assembly in under 2 minutes
· No adhesive or polishing required
· Compact tool without electric power

Easy installation in under 2 minutes

XP Fit Plus™
Field Installable Connector

## Easy installation in under 2 minutes

The SENKO XP Fit Plus is a pre-polished, pre-assembled connector compatible with standard SC and LC connectors. No epoxy is required as an internal mechanical grip effectively holds the fiber in place and can be installed in under two minutes. Without polishing or adhesives, the XP Fit Plus makes on site installations quick and easy, diminishing the need for epoxy curing and hand polishing at the work site. The XP Fit Plus comes with an assembly jig and fiber holder for 250μm and 900μm tight buffered fiber, ensuring accurate alignment and fiber cleave when terminating.

▶ **1** Cutting Fiber   ▶ **2** Inserting Fiber   ▶ **3** Take Out Connector

FEATURES

· Mechanical Splice (index matching gel)
· Highly Stable & Reliable
· Perfect Performance
· Compact Package
· RoHS Compliant
· Finished Connector meets UL94-V0 Flammability Rated
· TIA/EIA 568-C.3 Compliant

V-Groove Open — Inserted Wedge — Fiber
V-Groove Clamped Closed — Extracted Wedge — Fiber
Index Matching Gel — Pressure Plate — Clamp — Pre-Polished Fiber Stub — V-Groove Plate

XP Fit Plus SC
FIELD INSTALLABLE CONNECTOR

PART NUMBER	DESCRIPTION	HOUSING	BOOT COLOR
318-191-627	XPFit Plus SC Connector SM: PC 900μm/250μm (120 pack)	Blue	White
